CLIMATE CHANGE CONVERSATION: DEEP THINKERS NEEDED!

Submitted by Caterina Rost on October 28, 2016 - 2:47pm

CALLING ALL HUMANS! LET'S CONVENE ABOUT CLIMATE CHANGE

Climate change is the kind of problem that keeps us up at night. No matter where you live or what you do, you will be impacted by human-made changes to our atmosphere. It's something that no single discipline can hope to solve—we know that we must collaborate to innovate on this complex issue.

The Honors Community at UW generates interdisciplinary conversations where sciences and humanities join forces on contemporary global challenges like climate change. Our next event brings together David Battisti (Atmospheric Sciences), Jean Dennison (Anthropology), Hanson Hosein (Communication Leadership), and Vicky Lawson (Honors Program/Geography).

We hope you'll bring your passion for learning into our public conversation this November. Let's think bigger by thinking together about the future of our planet.

GLOBAL CHALLENGES—INTERDISCIPLINARY ANSWERS
